PREFACE

Agriculture plays an important role in the country's economy. Most of the country's population depends on agriculture. Inputs in Indian agriculture include land, labour, capital, and livestock. Some of the major inputs are land, labour, and capital. Pattern of economic activities is undergoing rapid change and so the country is seeking an increasingly modern base. Optimum use of inputs is essential for attaining a high level of productivity.

This book is designed to provide a general study of Indian agriculture. It is intended to study and understand the structure of the agricultural economy and the problems therein. It is expected to be useful to students in view of the current problem relating to farm sector and also in appraising public policies. The book will be valuable aid not only to the student, planners, advisers, administrators, and economists.

The whole book is divided into six parts. Part I is an introduction of agriculture sector. Part II deals with aspects of Indian agriculture. Land and labour are agriculture productivity. Water resources relating to irrigation facilities and farm mechanization are analysed in part four. Concepts of economic efficiency in agriculture productivity. Eventual changes in agriculture is take up in part six.

I have received valuable help and guidance from my colleagues. I have also received valuable help, guidance and suggestions from Dr. Mrudul Chandrakant Kamble. I express my deep gratitude.
